

Typed factual evidence

A common provenance base branches into metric observations and system invariants.

Common factual base

cell schema and type | cell ID | dataset and split | command
artifact reference and field | budget tier | leakage posture

metric_evidence_cell

metric + numeric value
model + calibration + exposure status
operating-point applicability + reference
Role: detector ranking or review-budget measurement

invariant_evidence_cell

invariant name + observed value + state
rowless-export status
detector metric fields prohibited
Role: factual governance or handoff state

Separate claim-gate record

evidence cell IDs | admissible use | blocked status | reason | missing evidence
