

Evaluation evidence by task contract

Within-task ranking estimates and validation-threshold review queues are reported separately.

A. Local test ranking evidence

PaySim

synthetic temporal proxy, seed 42

0.6388

Elliptic

later graph window, seed 42

0.6688

Single-seed point estimates. Bars summarize ranking within each declared task.

B. Validation-threshold review queues

PaySim precision

realized 1,109 / 123,580 (0.8974%)

0.7033

Elliptic precision

realized 36 / 11,184 (0.3219%)

1.0000

PaySim recall

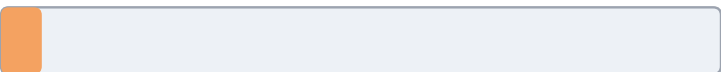

requested queue fraction 0.5000%

0.4716

Elliptic recall

requested queue fraction 0.5000%

0.0566

Values across datasets and task contracts are not directly comparable.
