

Benchmark evidence by task contract

Ranking evidence, external context, and realized review queues are reported in separate panels.

A. Local test ranking evidence

PaySim

synthetic temporal proxy, seed 42

0.6388

Elliptic

later graph window, seed 42

0.6688

Single-seed point estimates. Bars summarize within-task ranking only.

B. Elliptic2 reference context

Local context

RevTrack-evaluable cohort, 3 seeds

0.9432

RevClassifyDS

published external reference

0.9740

Cohort equivalence and parity are not established.
The earlier official-test exposure is disclosed.

C. Validation-threshold review queues

PaySim precision

realized 1,109 / 123,580 (0.8974%)

0.7033

PaySim recall

requested queue fraction 0.5000%

0.4716

Elliptic precision

realized 36 / 11,184 (0.3219%)

1.0000

Elliptic recall

requested queue fraction 0.5000%

0.0566

Values across datasets and task contracts are not directly comparable.
