

Benchmark evidence by task contract

Ranking evidence, external context, and realized review queues are reported in separate panels.

A. Local test ranking evidence

PaySim

0.6388

synthetic temporal proxy, seed 42

Elliptic

0.6688

later graph window, seed 42

Single-seed point estimates. Bars summarize within-task ranking only.

B. Elliptic2 reference context

Local context

0.9432

RevTrack-evaluable cohort, 3 seeds

RevClassifyDS

0.9740

published external reference

Cohort equivalence and parity are not established.
Prior exposure to the provided RevTrack TST split is disclosed.

C. Validation-threshold review queues

PaySim precision

0.7033

realized 1,109 / 123,580 (0.8974%)

PaySim recall

0.4716

requested queue fraction 0.5000%

Elliptic precision

1.0000

realized 36 / 11,184 (0.3219%)

Elliptic recall

0.0566

requested queue fraction 0.5000%

Values across datasets and task contracts are not directly comparable.
